

# Porcelain Use & Care Guide

1

Minimise knocks during handling to avoid damage.

2

Keep the underside of porcelain clean in order to avoid scratches that can occur when stacking.

3

Do not put overly heavy items on top of porcelain.

4

Good cleaning and hygiene depends on the hardness of the water, temperature, cycle time, dosage and type of detergent. Also ensure there is no water residue after washing. Do not soak tableware in chlorine or bleach.

5

In order to avoid thermal shock and cracking, do not put cold items (from fridge) in a hot oven and do not put hot items on a cold surface.
